Dear Ms. Webb:

I have contacted Secretary Buttigieg of the U.S. Department of Transportation, regarding the Railroad Crossing Elimination Program Grant application being submitted by the City of Muscatine for a grade separation project at the highway-rail grade crossing of the Canadian Pacific Railway at Dick Drake Way. I asked that this application be given all due consideration. Should I receive a response from the U.S. Department of Transportation, I will relay any helpful information to you.

Thank you for allowing me to be of assistance to you. If you have any further questions regarding this, or any other federal matter, please do not hesitate to contact me again.

Sincerely,

  
Charles E. Grassley  
United States Senator

## United States Senate

Dear Ms. Molacek,

Thank you for contacting me to request assistance with your grant application for the City of Muscatine. I appreciate the detail you provided to demonstrate how these grant funds would be utilized.

In order to be most helpful, I have contacted the Department of Transportation directly and requested full consideration of your grant application. As your United States Senator, it is an honor to ensure Iowans are considered for federal grants to better our communities and the services provided.

Thank you again for reaching out with your request. If you have any questions, please do not hesitate to contact Emily Covey in my Des Moines office at 733 Federal Building, 210 Walnut Street, Des Moines, IA or by phone at (515) 284-4574. Emily may also be reached by email at [Emily\\_Covey@ernst.senate.gov](mailto:Emily_Covey@ernst.senate.gov).

Sincerely,

Joni K. Ernst  
United States Senator

**Congress of the United States**  
**House of Representatives**  
**Washington, DC 20515**

August 15, 2022

The Honorable Pete Buttigieg  
U.S Secretary of Transportation  
1200 New Jersey Avenue, SE  
Washington, DC 20590

Dear Secretary Buttigieg:

I write to you regarding the City of Muscatine's application for funding through the Railroad Crossing Elimination Program planning grant for a grade separation project planned at the highway-rail grade crossing of the Canadian Pacific Railway at Dick Drake Way in Muscatine, Iowa. Please give their application due consideration under all applicable rules and laws.

According to the project sponsors, this project would transform the existing, highway-rail grade crossing into a grade-separated multimodal crossing, improving safety, efficiency of vehicular traffic flow, and community access to the southern part of Muscatine, especially with the anticipated merger of the Canadian Pacific Railway (CP) and Kansas City Southern Railway (KCS).

- **Safety:** The project sponsors anticipate the project will improve safety on multiple fronts. It will enable emergency responders to reach all parts of the city without the potential delay at highway-rail grade crossings. By providing a safer crossing option, this project will also mitigate current, unsafe behaviors of motorists and pedestrians at highway-rail grade crossings.
- **Efficiency:** The City of Muscatine has 15 highway-railroad grade crossings, containing up to four tracks, which currently cause transportation barriers and congestion. Once the CP/KCS merger is approved and joint rail operations begin, the City of Muscatine anticipates train traffic increasing from approximately 6 trains per day to 20 trains per day, potentially increasing vehicular delay and traffic congestion. This project will improve efficiency of vehicular traffic flow and the overall movement of people and goods throughout the city by providing one route for the traveling public resilient to barriers and delay caused by trains occupying highway-rail grade crossings.
- **Accessibility:** The southern part of Muscatine, which includes several residences, businesses, industries, community resources, and emergency services, is an economically disadvantaged area that is physically separated from the rest of the city by active rail lines. With the potential for increased train traffic, more frequent blocked crossings would limit access to resources and necessities for many people. By providing a grade-separated

crossing through this project, the City of Muscatine can enhance access for many who live or work in disadvantaged neighborhoods.

According to the project sponsors, the City of Muscatine continues to make significant investments in community amenities and services and is committed to prioritizing the quality of life in the city by improving vehicular and pedestrian access to these amenities and services.

For these reasons and those further described in their grant application, I would appreciate your full and fair consideration of the City of Muscatine's Railroad Crossing Elimination Program planning grant application. If you have any questions, please contact my Legislative Aide Blake Dickerson at (202) 225-6576 or at [blake@mail.house.gov](mailto:blake@mail.house.gov).

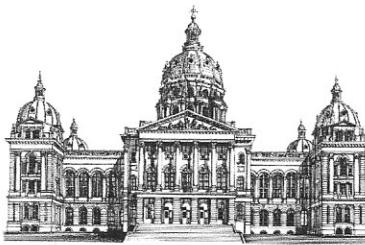

Sincerely,

A handwritten signature in black ink that reads "Mariannette J Miller-Meeks". The signature is fluid and cursive, with "Mariannette" and "Miller-Meeks" being the most distinct parts.

RE: Support for the City of Muscatine's Application for a Railroad Crossing Elimination Program Grant

Dear Secretary Buttigieg:

I am writing to express my strong support for the City of Muscatine's request for a Railroad Crossing Elimination Program planning grant for a grade separation project planned at the highway-rail grade crossing of the Canadian Pacific Railway at Dick Drake Way in Muscatine, Iowa. Please see below the three specific benefits of this project and my reasons for supporting this grant application.

- **Safety:** This project is anticipated to improve safety on multiple fronts. It will enable emergency responders to reach all parts of the city without the potential delay at highway-rail grade crossings. By providing a safer crossing option, this project will also mitigate current, unsafe behaviors of motorists and pedestrians at highway-rail grade crossings.
- **Efficiency:** The current railroad configuration in Muscatine already contains barriers and congestion. Once the CP/KCS joint rail operations begin, the City anticipates train traffic increasing from about 6 trains per day to 20 trains per day, increasing vehicular delay and traffic congestion. This project will improve efficiency of traffic flow and movement of people and goods throughout the city by providing one route for the public resilient to barriers and delay caused by trains occupying highway-rail grade crossings.
- **Accessibility:** Physically separated from the rest of the city by active rail lines, South Muscatine is an economically disadvantaged area comprised of residences, businesses, industries, community resources, and emergency services. With increased train traffic, more frequent blocked crossings would limit access to resources and necessities for many people. By providing a grade-separated crossing through this project, the City of Muscatine can enhance access for many who live or work in South Muscatine.

As a lifelong resident of Muscatine, I've seen firsthand how The City of Muscatine continues to make significant investments in community amenities and services and is committed to prioritizing the quality of life in the city. This is yet one more advance in this area. For these reasons, I would urge your strongest consideration of this application for the grade separation and the critical improvements this project would provide. My support, the support of CP, as well as many other Iowa partners and the public, demonstrates that our community and the State of Iowa understands the need for and importance of this grade separation project.

Sincerely,

Mr. Douglas Gascon  
Office of Policy and Planning  
Federal Railroad Administration  
1200 New Jersey Avenue SE, Room W38-212  
Washington DC 20590

Dear Mr. Gascon,

Please accept this letter of support for the City of Muscatine, Iowa's Rail Crossing Elimination Program (RCE) grant application seeking planning / design funds for a grade-separation project at the highway-rail crossing of the Canadian Pacific Railway (CP) at Dick Drake Way in Muscatine. Muscatine Power and Water (MPW) is a municipal utility serving Muscatine and the surrounding area with electric, water, and telecommunication services. In addition to serving citizens and territory on both sides of the CP main line through Muscatine, MPW also operates an electric generating station and well fields on the southeast side of the Dick Drake Way crossing.

MPW supports the planning and design of a rail overpass at this location to improve safety, accessibility, and general traffic flow to the area. The CP has indicated that their merger with the Kansas City Southern will increase rail traffic through Muscatine roughly four-fold. In addition, CP identifies this intersection on the Canadian Pacific Acquisition of Kansas City Southern interactive map as one that is both a delay and safety hazard with the new traffic levels. The CP main line travels directly through census blocks in Muscatine that are identified as low income and/or minority populations. This intersection is just to the south of those areas. Providing an overpass at this location is not without design challenges due to existing utility infrastructure; however, it is the one intersection in town most feasible to upgrade to an overpass serving residential, industrial, and train traffic in the area. RCE grant funding will provide for a thorough plan for eliminating this grade level crossing.

There are many benefits associated with this grade separation project. They include:

- Improved safety at that intersection.
  - Eliminates the chance of a vehicle train accident at that intersection.
  - Reduces hazardous product vehicles and busses intersecting with trains in Muscatine.
  - Provides reliable access to the southeast part of town for additional emergency vehicles.
  - Eliminates both a road and walking/bike trail rail crossing of the tracks.
  - With no delays, additional industrial traffic may choose this intersection rather than others within the city.

- Improved traffic flow when rail traffic increases:
  - Improved deliveries of parts and materials to and removal of beneficial reuse materials from the Generation site.
  - Improved community access for our electric, water, and telecommunications crews serving customers on the southeast side of the tracks.
  - Reduce delays for staff and contractors arriving/leaving the Generation site and moving between locations for work and meetings.
- Significantly reduced vehicle emissions:
  - Much of the industrial production activity in Muscatine occurs on the south side of this main track. However, the main supply routes for raw and finished materials into and out of these facilities are located north of the tracks. This results in a significant amount of heavy vehicle traffic at this crossing.
  - A four-fold increase in train traffic will result in a significant increase in traffic idling at this and other crossings in Muscatine. By providing at least one continuously available crossing, the majority of this traffic will be able to flow freely, thus eliminating vehicle idle time at the crossings and significantly reducing emissions.

The Muscatine proposal supports the RCE program by removing a grade level crossing on a heavily traveled crossing that serves both residential and industrial traffic. With the significant proposed increase in rail traffic through Muscatine, having one continuously available crossing will be important to improve safety, provide economic growth opportunities, and maintain accessibility to the southeast side of the tracks.

Sincerely,

Gage Huston

RE: Support for the City of Muscatine's Application for a Railroad Crossing Elimination Program Grant

Dear Secretary Buttigieg:

As a partner of the City of Muscatine, we are supportive of their request for a Railroad Crossing Elimination Program planning grant for a grade separation project planned at the highway-rail grade crossing of the Canadian Pacific Railway at Dick Drake Way in Muscatine, Iowa. This project would transform the existing, highway-rail grade crossing into a grade-separated multimodal crossing, improving safety, efficiency of vehicular traffic flow, and community access to the southern part of Muscatine, especially with the anticipated merger of the Canadian Pacific Railway (CP) and Kansas City Southern Railway (KCS).

- Safety: This project is anticipated to improve safety on multiple fronts. It will enable emergency responders to reach all parts of the city without the potential delay at highway-rail grade crossings. By providing a safer crossing option, this project will also mitigate current, unsafe behaviors of motorists and pedestrians at highway-rail grade crossings.
- Efficiency: The City of Muscatine has 15 highway-railroad grade crossings, containing up to four tracks, which currently cause transportation barriers and congestion. Once the CP/KCS merger is approved and joint rail operations begin, the City of Muscatine anticipates train traffic increasing from approximately 6 trains per day to 20 trains per day, potentially increasing vehicular delay and traffic congestion. This project will improve efficiency of vehicular traffic flow and the overall movement of people and goods throughout the city by providing one route for the traveling public resilient to barriers and delay caused by trains occupying highway-rail grade crossings.
- Accessibility: The southern part of Muscatine, which includes several residences, businesses, industries, community resources, and emergency services, is an economically disadvantaged area that is physically separated from the rest of the city by active rail lines. With the potential for increased train traffic, more frequent blocked crossings would limit access to resources and necessities for many people. By providing a grade-separated crossing through this project, the City of Muscatine can enhance access for many who live or work in disadvantaged neighborhoods.

MidAmerican Energy Company
